

Manual Test Cases

- **MC_01: E2E Integration Test: Portal Entry Point**
 - **Acceptance Criteria (AC):** AC_01.1
 - **Priority:** High
 - **Preconditions:** Browser cache and cookies are cleared; no active booking session exists.
 - **Steps:**
 1. Navigate to the Homburg city portal:
[\[https://www.homburg.de/\]](https://www.homburg.de/).
 2. In the main navigation menu, click on "Rathaus".
 3. From the dropdown list, select "Stadtverwaltung", then navigate to "Online-Dienste".
 4. Locate the graphical tile labeled "Termin mit Bürgerbüro/Führerscheinstelle vereinbaren" and click it.
 - **Expected Result:** The widget's landing page (Step 1 of 6) loads successfully in a new browser tab. The address bar displays the target URL:
[\[https://termine-reservieren.de/termine/homburg/\]](https://termine-reservieren.de/termine/homburg/).

- **MC_02: Boundary Value Validation: Date of Birth Triad (Step 5)**
 - **Acceptance Criteria (AC):** AC_07.3, AC_07.4
 - **Priority:** High
 - **Preconditions:** Active session; user is on Step 5. Mandatory text fields (Vorname, Nachname, E-Mail, E-Mail-Wiederholung) are populated with valid test data. Privacy consent checkbox is checked. Date of birth fields (Tag, Monat, Jahr) are initially empty.
 - **Steps:**
 - Enter the current year (e.g., 2026) into the "Jahr" field. Leave "Tag" and "Monat" empty. Unfocus the field.
 - Verify the status marker next to the "Jahr" field and the state of the "Reservieren" button.
 - Clear the "Jahr" field, enter an unrealistic year (e.g., 1899), and unfocus. Verify the status marker and the button state.
 - Clear the "Jahr" field, enter a valid birth year (e.g., 1995), and unfocus. Verify the status marker and the button state.
 - **Expected Result:**
 - **Step 2:** A green success marker ([✓]) appears next to the "Jahr" field. The interface permits form submission without Day/Month values; the "Reservieren" button becomes enabled.
 - **Step 3:** The system identifies the year as being outside the valid range. A red error marker (![!]) appears next to the "Jahr" input, the form validation fails, and the "Reservieren" button becomes disabled (cursor: `not-allowed`).

- **Step 4:** The success marker ([✓]) reappears next to the "Jahr" field, all mandatory validations are satisfied, and the "Reservieren" button becomes active.
- **MC_03: UX Isolation & Legal Modal Logic**
 - **Acceptance Criteria (AC):** INF_02
 - **Priority:** Medium
 - **Preconditions:** User is on Step 1 of the booking widget. The global session timer in the footer is active and counting down.
 - **Steps:**
 - Scroll to the bottom of the page and click the "Datenschutzerklärung" link in the footer.
 - Visually confirm the appearance of the modal window, the correctness of the German text, and the background overlay (blocking background interaction).
 - Locate the "Hier" hyperlink within the modal text (linking to the full DSGVO document) and click it.
 - Return to the initial widget tab and click the "Schliessen" button (or the close [X] icon in the top-right corner).
 - **Expected Result:**
 - **Step 2:** The legal information modal opens as an overlay. The background is dimmed, and interactions with the Step 1 department selection buttons are completely disabled.
 - **Step 3:** The full privacy policy document opens in a new browser tab (`target="_blank"`). The booking session and the modal window on the original tab remain active and state-preserved; the footer timer continues to count down without interruption.
 - **Step 4:** The modal window closes smoothly. The user is returned to Step 1 in its initial state, and no previously selected parameters are reset.
